

PACK CHALLENGES

SUMO

Crank up the power and watch your team's bubble grow. The team generating the most power on average wins! Keep your leg speed between 60-85 RPM, ramp up the resistance and generate as much power as you can to make your team's bubble the biggest.

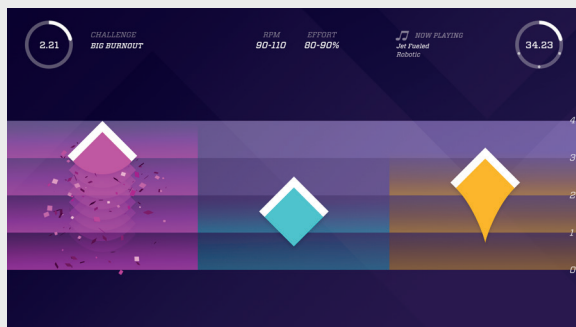

HOLD THE LINE

Maintain your RPM to keep the arrow on the line. This is more of a technical challenge as opposed to a power-based one. The team that holds the RPM on the line across the screen for the longest time wins.

SPEED FREAKS

Bolt it round the track in our exciting speed and distance challenge. The team that completes the most laps wins! The track is 400 metres long, and our top leg speed is set at 120 revolutions per minute. Resistance is kept low to help you travel further and faster, but definitely still on to keep things tough.

BIG BURNOUT

Go hard on the watts and power your way to the top. The team with the highest cumulative power (measured in watts/kg) wins! There are four levels to burn through on your way, with the top leg speed set at 90 RPM. Resistance is kept high enough to make sure you maintain good cycling technique and create as much power as possible.
